

Making the most of your metal roof

Anticon™ Roofing Blanket

Whether your home is traditional or contemporary, a metal roof can make a stylish statement. But for performance as well as looks you should ensure that CSR Bradford Insulation Anticon roofing blanket is installed under the roof metal.

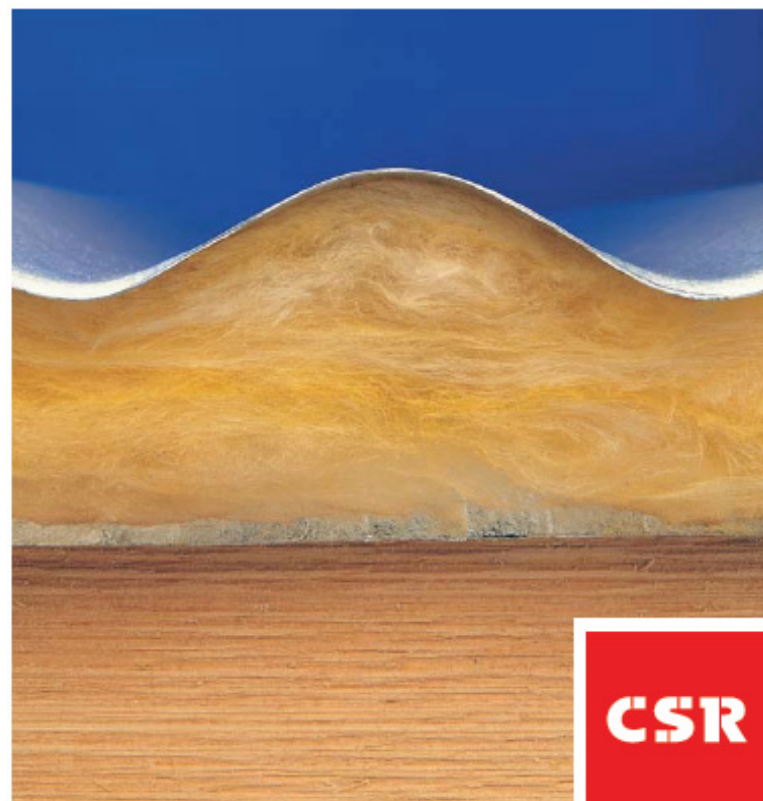

Anticon is specially designed to enhance the performance of metal roofs in a number of ways including:

- Providing thermal insulation to keep out the summer heat and stop the warmth leaving your home in winter
- Reducing rain and aircraft noise
- Preventing condensation forming under the roof which can cause staining and potentially damage timber rafters
- Reducing load on heating and air-conditioning helping to save energy costs and protect the environment
- Helping retard the spread of flame in the event of a roof-space fire
- Reducing "metal creep" – creaking noises which can occur when there are sudden temperature changes
- Guaranteed for the life of the home

What is Anticon?

Anticon combines two very effective forms of insulation into a single product for maximum performance. It consists of a glasswool blanket - the world's most popular insulation - adhered to a reflective foil facing. The reflective foil acts as a barrier, which reflects up to 95% of radiant heat entering your roof cavity and prevents condensation, while the blanket absorbs outside noise and slows the transfer of heat into and out of your home.

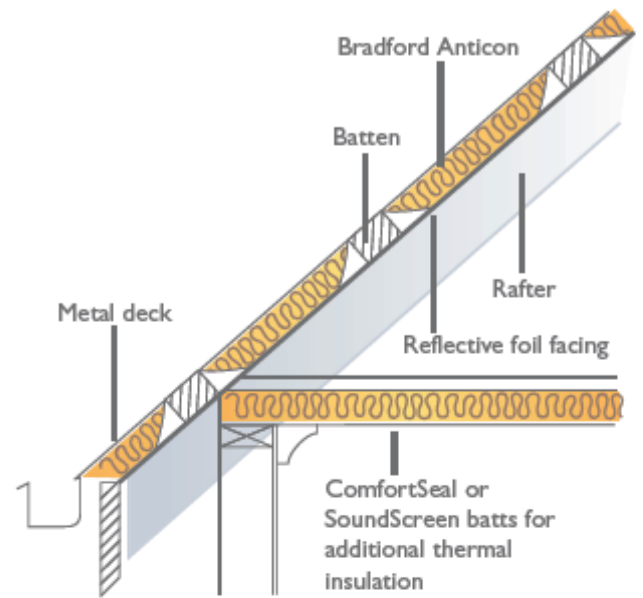

Anticon has a 150mm foil overlap for added condensation protection.

Energy Efficiency

All new homes in Australia are now required to meet minimum standards of energy efficiency. Including Anticon in your roof will help meet the regulatory requirements.

Anticon comes in a range of R values so, no matter where you are, there is a system to meet your needs. Your local CSR Bradford Insulation Distributor will be happy to advise you of the best system for your job.

Now's your chance

Anticon is simple to install but only while you're building your home or replacing the roof. It rolls out over the purlins before the metal roofing is fixed on, so this is your opportunity to ensure you enjoy the additional comfort, peace and savings of an Anticon insulated roof.

Specifications

Product Name	Summer R _T value Heat Flow Down	Winter R _T value Heat Flow Up	Thickness	Dimensions	Area per pack
Anticon 55	R2.6	R2.1	55mm	15m x 1200mm	18m ²
Anticon 75	R3.1	R2.6	75mm	15m x 1200mm	18m ²
Anticon 95	R3.6	R3.1	95mm	10m x 1200mm	12m ²

Anticon is available with a range of factory applied foil grades if higher levels of tear and puncture resistance are required. Please note that R_T refers to the total R value for roof applications
